

forms were interrelated by sialic acid residues. The results of isoelectrofocusing before and after neuraminidase treatment suggest that at least the most acidic minor form with pI of 5.05 contains sialic acid residues.

The author thanks Drs. T. Kuribayashi and J. Noda for their encouragement.

ANNUAL MEETING OF ESDR MAY 12-14, 1980

The 1980 Annual Meeting of the European Society for Dermatological Research (ESDR) will be held in the RAI Congresscentrum, Amsterdam, May 12-14, 1980. Attendance at scientific sessions will be open to all members, contributors and guests. Nonmembers who wish to present a paper may submit an abstract. They will be invited to attend the meeting as either contributors or guests. Abstracts should be presented on the official form. The deadline for submission of abstracts is December 1, 1979. Abstract forms can be obtained from: M. W. Greaves, ESDR Secretary, Institute of Dermatology, Homerton Grove, London E9 6BX, U.K.
